IN THE DESCRIPTION

Kindly amend the following paragraph, at page 47, lines 25-29, as follows:

Once the Suture split-nut SSN is in place, the band is moved from the surface ~~R1- R2~~ to the surface R1 to cause the sections C1, C2, to clamp the suture S. In figure 123, the band B is shown approaching the ramped surface R1. This brings the sections C1 and C2 toward each other so that the hole H is narrower and almost clamping the suture S. This same position of the band is depicted in figure 124.
